

FAQ's ABOUT AIRBRUSH TANNING

How does Airbrush Tanning work? The active ingredient in virtually all sunless tanning formulas is DHA (dihydroxyacetone). When DHA is applied to the skin, it causes a harmless chemical reaction with the amino acids in the skin to produce a tan, much like the sun does, but without UVA and UVB damage to the skin. The airbrush tanning solution is manually sprayed in a fine mist all over the body or desired areas. There are no tanning beds or spray booths. The process will take about 20-minutes including drying time.

Is this safe for my skin? DHA has been approved by the FDA for cosmetic applications. It has been used for over 30 years without any harmful effect.

NOTE: IF YOU ARE PREGNANT, CONSULT YOUR PHYSICIAN PRIOR TO YOUR TANNING SESSION AND BRING WRITTEN PERMISSION FROM YOUR PHYSICIAN TO HAVE ON FILE.

How long will my tan last? Depending on your activities and skin type, the tan should last 5-7 days. With follow-up applications, you can maintain your tan indefinitely.

What should I wear for my tanning session? Swimwear is the most popular choice. We do offer disposable undergarments as an option.

24 -HOURS PRIOR TO YOUR TANNING SESSION

- Exfoliate. Exfoliate. Exfoliate. 24-hours prior to your session, exfoliate your entire body using a granular body scrub to clear away any dry, dead skin cells.
- Avoid using bar soaps, high PH shower products or in-shower moisturizers. These products can neutralize the DHA bronzing reaction with the skin.
- Depilatory creams, waxing or shaving should be completed 24-hours prior to your session.

DAY OF – PRIOR TO YOUR SESSION

- Avoid applying **ANYTHING** to the skin that may act like a barrier between the sunless solution and the skin. Deep penetration of the solution is key to a beautiful lasting color. **DO NOT APPLY LOTIONS, CREAMS, PERFUME OR DEODORANT PRIOR TO YOUR SESSION.** Come to your session with clean, dry skin.
- Remove any make-up prior to the sunless application.
- Wear loose fitting and dark color clothing to your session.

POST AIRBRUSH TANNING | SUNLESS MAINTENANCE TIPS

- Avoid straps or elastic for a minimum of 4 hours after your session.
- Don't exercise immediately following your tanning session. Excessive perspiration can affect the tanning process.
- Refrain from showering as long as possible (up to 24-hours). As with all DHA products, sunless color begins showing development approx. 4-hours after application and continues to darken for up to 24-hours. Showering prior to 24-hours post session will **NOT** offer full development of the color. **If you must shower during the 4 to 24-hours post application, USE A WARM WATER RINSE ONLY.** The use of soap can inhibit the development of DHA color.
- **IMPORTANT- The instant cosmetic bronzer applied during your airbrush session will wash away during the first shower. Pools and spas that utilize chlorine can cause fading.**
- When showering after 24-hours, use only a mild PH balancing shower gel. Refrain from using scrubs or high PH soaps as these will strip away your sunless color. Extend your color between applications with pro-longing moisturizers or a color enhancing extending lotion; all of which are available in our retail section.
- The cosmetic bronzer in your initial application may transfer to light colored fabrics, clothing and furniture. Simply use mild soap and water to remove.
